DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I-XIII, claim(s) 1, in part, drawn to a nucleic acid encoding in the alternative, 13 different proteins. For example, if group I is elected, claim 1 will be examined to the extent that it applies to y-adaptin. If group XIII is elected, claim 1 will be examined to the extent that it applies to a7 subunit.

Group XIV, claim(s) 2, drawn to a method of diagnosing schizophrenia in a patient by comparing in a cell or tissue, relative levels of mRNAs for genes and ESTs differentially regulated in patients with schizophrenia as compared to mRNA levels of genes unaltered in schizophrenic patients.

Group XV, claim(s) 3, drawn to a method of evaluating agents for treatment of schizophrenia by comparing levels of mRNAs for genes and ESTs before and after the agent is administered.

2. The inventions listed as Groups I-XV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the nucleic acid encoding each of the structurally and functionally distinct polypeptides, are themselves structurally and functionally distinct and do not share the same or corresponding special technical feature. Further, unity of invention is not present as sequences encoding GluR1, for example, were known in the art at the time of the invention (see Sokolov, B.P; Journal of Neurochemistry, 1999, vol. 71, pp 2454-2465).

3. Groups I-XIII are patentably distinct because each protein is directed to a structurally and functionally distinct polypeptide. Accordingly, nucleic acids encoding such are structurally and functionally distinct.

Art Unit: 1634

The products of groups I-XIII are patentably distinct from the methods of groups XIV and XV because the methods of diagnosing schizophrenia and evaluating agents for treatment of schizophrenia do not require use of any of the products of groups I-XIII.

The method of group XIV is patentably distinct from the method of group XV because the methods require different process steps and are unobvious over one another.

4. A telephone call was made to Jane Massey Licata on October 14, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to examiner Jehanne Souaya whose telephone number is (703) 308-6565. The examiner can normally be reached Monday-Friday from 9:00 AM to 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Jones, can be reached on (703) 308-1152. The fax phone number for this Group is (703) 872-9306.
